PROFILE

Full-stack Developer experienced in building and shipping web applications across the full stack. Delivered features end-to-end, from responsive React frontends and performant REST APIs to role-based access control and CI/CD pipelines on a VPS. Comfortable working across the full stack in real-world, client-facing environments.

WORK EXPERIENCE

PT Teknologi Manufaktur Indonesia (e-Manufaktur) Contract – On site
Full-stack Developer & DevOps May 2026 – Aug 2026

- Promoted to Full-stack Developer & DevOps after 6 months.
- Managed CI/CD pipelines through GitHub Actions and implemented Linux server deployments via PM2 on a VPS.
- Built a push and email notification system alerting users to assigned inquiries and approval status changes.
- Implemented role-based access control managing 3 roles across 6 departments with distinct permissions and responsibilities.
- Engineered a comprehensive RBAC system to secure frontend navigation and backend endpoints.
- Implemented Google Drive API storage upload system for storing and retrieving documents.

Full-stack Developer Nov 2025 – May 2026

- Developed a full-stack ERP system from scratch streamlining the transition from initial Inquiry → Internal Calculation → Quotation, reducing manual data entry and improving departmental handoff efficiency.
- Architected a React (Vite) admin dashboard with Chakra UI, routing, rich text editor, and reusable UI components for master data management with custom compound components and responsive design.
- Implemented persistent drafts across multiple forms to prevent data loss and improve user workflow efficiency.
- Developed and deployed high-performance REST APIs using Go and GORM, featuring advanced server-side pagination, multi-parameter filtering, and dynamic sorting for large-scale manufacturing datasets.
- Designed a multi-stage approval and rejection workflow for inquiries and quotations with full status tracking.
- Implemented organization-level data isolation and cookie-based JWT authentication with expiry handling and protected routes auth to prevent unauthorized cross-tenant data access.
- Implemented a backend PDF rendering service for quotation that allows users to generate, preview, and download professional quotations instantly, ensuring data accuracy between the database and client-facing documents.

CV. David Teknik Blower Freelance - Remote
Front-end Developer Nov 2024 – Feb 2025

- Developed responsive front-end components for a commercial website using React.
- Translated Figma designs into responsive, production-ready interfaces while maintaining design fidelity across breakpoints.
- Collaborated closely with the project manager to implement design requirements effectively.
- Live website: davidteknik.com

PROJECTS

UG-BOT | Gunadarma University Chatbot Website

Tech: React, Express.js, MongoDB, Node.js, Chakra UI, Botpress, JWT

- Developed a web-based chatbot that handle student registration and provides information about Gunadarma University, including general information, student services, and campus locations.
- Built the frontend using React and Chakra UI, ensuring a responsive and visually consistent user interface, and the backend with Node.js and Express.js to handle API requests, authentication, and data communication.
- Integrated Botpress for chatbot framework to enable intelligent, conversational responses to user inquiries and connected it to the Admin Dashboard via Botpress SDK library and backend API.
- Utilized MongoDB Atlas for data storage and implemented JWT authentication for admin access.
- Live website: ug-bot-demo.netlify.app.

Car Data Management Web App

Tech: PHP, CodeIgniter, MySQL, MVC, Materialize, SweetAlert2.

- Built a CRUD web app to manage car data (model, description, image) with MySQL backend.
- Implemented MySQL as the backend database and ran the application locally via XAMPP.
- Used Materialize as the CSS framework and SweetAlert2 for user-friendly alert pop-ups to improve UX during CRUD operations.
- View GitHub Repository.

EDUCATION

Gunadarma University – Bachelor of Informatics — Depok, Indonesia
SEP 2021 – AUG 2025 — IPK 3.84 / 4.00

CERTIFICATION

Occupation of Junior Web Developer — Jun 2025
BNSP (Badan Nasional Sertifikat Profesi) — View credential

Responsive Web Design — Feb 2024
freeCodeCamp — View credential

JavaScript Algorithm and Data Structures — Mar 2024
freeCodeCamp — View credential

SKILLS

Hard Skills:

HTML, CSS, JavaScript, React, Node.js, Express.js, Go, Fiber, Bootstrap, Materialize, SweetAlert2, PHP, CodeIgniter, Java, Python, MongoDB, PostgreSQL, MySQL, Fiber framework, GORM, JWT, VPS, Github Actions, Linux

Soft Skills:

Communication, Problem Solving, Team Collaboration, Eagerness to Learn

Software Skills:

VS Code, Git, XAMPP, Figma, Canva

LANGUAGES

Indonesian: Native

English: EF SET C2 Proficient, 77/100 (Reading 72, Listening 81), Oct 2026 – View credential
